Keep in Mind when making your Choice

Materials & Maintenance

COF - CUSTOMER OWN FABRIC

- price from the Price List refers to fabrics without any patterns
- all orders submited in COF needs to be approved from the manufacturer based on the delivered sample, min. size 15 × 20 cm
- for use of the fabrics with pattern it's necessary to submit a min. 1 ml sample, in order to make estimation of consumption of the fabric and additional work that will determine the price
- Prostoria is not responsible for any claims related to the fabric quality
- fabric needs to be delivered min. 15 days prior to the dispatch date

COL - CUSTOMER OWN LEATHER

- possibility of using leather selected by the customer is available solely with prior submission of a sample, size of approx. 20 × 30 cm
- leather consumption depends on the leather quality; natural or prefabrication flaws might increase required quantites
- Prostoria is not responsible for any claims related to the leather quality
- leather needs to be delivered min. 15 days prior to the dispatch date

and simple guidelines:

- avoid placing the product near a source of heat and exposing it to direct sunlight as this may cause alternations in the tone and affect the hardness of the product. - when moving the product, be careful not to drag it on the floor as such action
- may result in damage both to the product and the floor
- perform regular checks of the condition of the sliders as it may result in damage of the product and the floor; you can purchase additional or new sliders (plastic or felt) at the nearest salon or at the dealer where you purchased the product
- for stackable products, check the condition of the safety components; if they fall out, the products may be damaged, and you should contact the nearest salon or the dealer where you've purchased the product
- chairs and easy chairs should be stacked carefully and according to the listed stacking number to avoid any possibility of damage
- for tables and coffee tables, avoid partial covering of the surface as this may cause discoloration of the surface
- or damp objects
- or using protective covers
- swinging or standing on a chair
- avoid placing greasy, wet, hot or cold objects directly on the solid wood surfaces, as they may leave a permanent trace

PRODUCT CONSTRUCTIONS

The inner construction of our furniture is made of panel materials (plywood) and/or metal elements, which provide the basic shape of the product. Seat and backrest supports (wave springs, elastic bands, goodside® slats), together with the foam (HR foam, polyurethane foam), make our furniture comfortable and durable.

Foams are high quality polymer materials with high elasticity and resistancy to permanent deformation. HR foam is produced by cold process based on water and does not contain any harmful chemicals. It has excellent hygienic and antiallergic properties. Polyurethane foam is made of recyclable material. We use cold and polyurethane foams of a wide range of density and hardness to provide a wide selection in obtaining the desired comfort. Moulded polyurethane foam is used in products of specific shape - the construction is soaked in foam which takes the form of a mould into which it is poured. Due to expansion, this process results in the final form ready for upholstering.

use by the sea.

European manufacturers.

We approach the wood as a natural resource with great respect and responsibility. The raw material we use the most is solid wood, especially Slavonian oak. In order to promote sustainable development and environmental protection, we are part of the Slavonian Oak Cluster. We have also introduced the FSC-STD-40-004 V3-0 Certificate to guarantee the sustainable development of forest management. The ISO 14001: 2015 standard sets out requirements for the environmental management system, including the planning, establishment, implementation and monitoring of the environmental management system.

4

To maintain the quality and durability of your product for as long as possible, you should follow these basic

- for surfaces used for shelving, be careful not to damage the surface with sharp
- suitably protect and store products for outdoor use over winter or against adverse conditions; we recommend storing those products in a dry and airy place
- avoid improper use of the product, such as sitting on a backrest or armrest, or

Metal parts are made of the highest quality aluminium, carbon steel and stainless steel suitable for outdoor

The fabrics and the leathers in our collection originate from the workshops of the most famous and renown

Materials & Maintenance

Materials & Maintenance

solid wood

Natural imperfections of wood, such as variations in colour and texture, knots and tree rings, are not considered faults and undesirable characteristics but rather values of the natural material used. Our wood is treated with oil or lacquer in such a way that the material appears as naturally as possible, emphasising the appearance of an open tree ring. Colour lacquer does not completely fill the pores of wood to highlight the natural quality of the material, and tree rings remain visible. There are no visible tree rings in lacquered plywood. Oil and lacquer on all wooden surfaces always give matte effect, which is Prostoria's visual standard for the processing and protection of the wood.

Outdoor wood has an even more pronounced change in the tone and intensity of visible tree rings over time, which is not considered as a flaw but a natural quality and refinement of the product.

black

Wipe the surface regularly with a clean and dry cloth. If the surface of the product is dirty, you can wipe it using a well-drained cloth soaked in water or a light neutral soap. Remove any soapy residue immediately. If the surface is slightly damaged or appears matt, we recommend our wood surface maintenance kit. Avoid products containing acetone, diluents, ammonia, abrasive detergents or furniture wax. avoid placing greasy, wet, hot or cold objects directly on the solid wood surfaces, as they may leave a permanent trace.

table tops

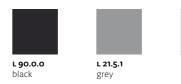

MDF + FENIX NTM

Fenix NTM is a table top finish in the form of a thin laminate that is pressed to the bottom and top of the mdf. The sides of the mdf are lacquered. Fenix is a durable material that does not show fingerprints. It can be cleaned using a damp soft cloth soaked in warm water or a solution of water and mild detergent. We recommend the use of the Fenix maintenance kit (contact your nearest salon or the dealer where you purchased the product). Damages such as scratches that are not cut in can be treated thermally using an iron and a damp cloth.

TRESPA HPI

aggressive and aggressive cleaning agents. any traces remaining after washing.

GLASS

Glass surfaces can be cleaned with a well-drained soft cloth soaked in a mixture of alcohol and water or glass cleaner. Wipe the surface with a dry, lint-free cloth. Avoid products containing acetone, ammonia, chlorine, and solvents, abrasives, and furniture wax.

prostoria

prostoria

Trespa Meteon outdoor table tops have a compressed surface, virtually pore-free, making them impervious to contamination. This is why Trespa Meteon® is highly resistant to most chemicals, including many non-

Do not use abrasive or polishing cleaners. Use only clean sponges and soft cloths. Algae and mould will not penetrate the pores of the material so they are easy to clean just like dust, stains or fingerprints. You can wash them off using a universal household cleaner. Rinse and wipe the board using a soft cloth to avoid

Materials & Maintenance

table tops

Compact boards are high-pressure thermoset laminates (HPL) obtained by pressing under high pressure and high temperature. Refined with decor on both sides, this multi-layer material is at the same time extremely resistant and long-lasting as well as easy to maintain. It also provides high resistance to scratches, wear, solvents, chemicals, moisture and heat. The surface of Compact boards is extremely resistant to dirt, but if necessary it can be treated with standard non-abrasive cleaners.

COMPACT BOARDS

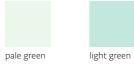

metal

All powder coated metal products and elements have a matte finish, which is Prostoria's visual standard used in the processing and protection of metallic materials. Hand-welded metal parts may have minor imperfections that do not affect the quality or function of the product, but are a reflection of the manual work of our craftsmen. Metal products intended for outdoor use have a double finish - a primer for better mechanical resistance and a coloured coating for protection against corrosion. To clean powder coated metal products use a damp soft cloth soaked in a solution of water and a pH neutral detergent, and wipe using a clean, dry and soft cloth.

Materials & Maintenance

upholstery & cushions

Suede and other types of leather may have scars and wrinkles, or minor changes in tone or imperfections that are not considered faults but an anomaly that confirms the natural quality of the material. As such, they are considered a positive feature of the product. It is the responsibility of Prostoria to position such anomalies on less visible parts of the product when tailoring the material.

Some types of fabrics have certain properties due to finishing, such as tufting, dots or other effects on fabrics, etching of velvet, or production methods that are not considered as flaws. For fabrics, suede and other types of leather, each production lot may indicate a slight difference in colour in comparison with the pattern or a product manufactured at an earlier time. To properly maintain the leather and fabrics, visit the manufacturer's website or www.prostoria.eu and follow the instructions.

Products made with leather or fabric should not be exposed to direct light and positioned at least 1 meter away from the source of the heat, as those factors may contribute to discoloration or drying of the leather, which can cause cracks.

Upholstered sofas should be vacuumed regularly using a suitable extension and ventilated to prevent deterioration and impurities. Due to use, the fabric will eventually need to be straightened and seams adjusted manually. The folds can be straightened using steam. In case of spillage, remove the liquid immediately by tapping with absorbent paper or cloth. Do not rub the stain!

The velour covers should also be regularly vacuumed or wiped with a cloth, always following the direction of the thread. Aniline leather has no or very light surface protection and, by its nature, gains patina and traces of use over time. Semi-aniline leather has a lightweight surface protection so these furniture sets can be vacuumed and stains cleaned using a damp cloth soaked in the water, a light neutral soap, or a specialized leather care agent. Remove soap marks immediately using a dry, soft, cotton cloth. Be careful not to let too much water soak into the pores. Always remove stains moving from the edge towards the centre of the stain, so as not to expand the affected area. Avoid concentrated detergents or agents containing bleach, ammonia, or products used for cleaning and protecting of clothing and shoes.

The Outdoor textiles are water-repellent and fast drying. They are resistant to negative environmental impacts and damage caused by sun, seawater and chlorine. To find out more about the properties and methods of care and maintenance of the Outdoor textile, visit the website linked below.

Cushions can be filled with 100% feathers and down mixture, or with 100% polyester fibre filling. In order for the cushions to look good and provide comfort for as long as possible, they need to be regularly aerated and their filling shaken, which will allow them to return to their original shape. We recommend rotating the cushions (top-bottom and front-back sides) so that they are equally used on all sides. Cushions filled with feathers have a 100% goose feathers and down filling, without chemical treatment. They should be shaken and tapped regularly to redistribute the filling and reduce the effect of flattening.
