

Materials & Maintenance

solid wood

Natural imperfections of wood, such as variations in colour and texture, knots and tree rings, are not considered faults and undesirable characteristics but rather values of the natural material used. Our wood is treated with oil or lacquer in such a way that the material appears as naturally as possible, emphasising the appearance of an open tree ring. Colour lacquer does not completely fill the pores of wood to highlight the natural quality of the material, and tree rings remain visible. There are no visible tree rings

in lacquered plywood. Oil and lacquer on all wooden surfaces always give a matte effect, which is Prostoria's visual standard for the processing and protection of the wood. Outdoor wood has an even more pronounced change in the tone and intensity of visible tree rings over time, which is not considered as a flaw but a natural quality and refinement of the product.

Wipe the surface regularly with a clean and dry cloth. If the surface of the product is dirty, you can wipe it using a well-drained cloth soaked in water or a light neutral soap. Remove any soapy residue immediately.

If the surface is slightly damaged or appears matt, we recommend our wood surface maintenance kit. Avoid products containing acetone, diluents, ammonia, abrasive detergents or furniture wax. Avoid placing greasy, wet, hot or cold objects directly on the solid wood surfaces, as they may leave a permanent trace.

Materials & Maintenance

metal

All powder coated metal products and elements have a matte finish, which is Prostoria's visual standard used in the processing and protection of metallic materials. Hand-welded metal parts may have minor imperfections that do not affect the quality or function of the product, but are a reflection of the manual work of our craftsmen. Metal products intended for outdoor use have a double finish - a primer for better mechanical resistance and a coloured coating for protection against corrosion.

To clean powder coated metal products use a damp soft cloth soaked in a solution of water and a pH neutral detergent, and wipe using a clean, dry and soft cloth.
